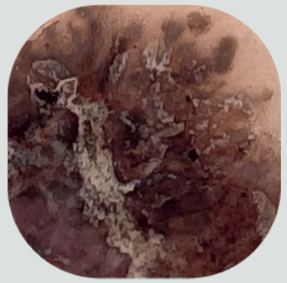
Capture.
Analyze.
Follow.

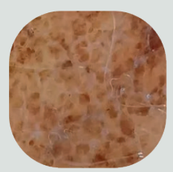
Capture clinical, dermoscopic, and trichoscopic images in one purpose-built device.

Locate lesions, follow skin and hair over time, and add AI* support when useful.

The World's First AI-Powered* Digital Handheld Dermatoscope **for Skin and Hair.**

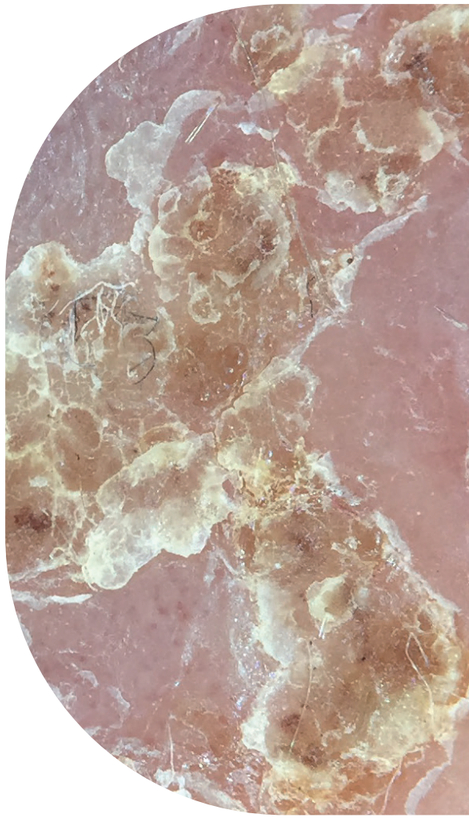
* FotoFinder AI is not FDA-cleared in the USA and not Health Canada approved for use in Canada.





Dermoscopy

- Capture, document, and analyze skin lesions with clinical precision.
- Elevate your dermoscopy with a fully digital workflow. Record high-resolution images of lesions, document findings in a structured format, and receive real-time AI-supported analysis – all from a single handheld device.
- Mark and monitor suspicious lesions over time, compare follow-up images side by side, and store everything securely in your personal Hub Cloud. Available with flexible usage-based pricing, so your workflow scales with your practice.



Trichoscopy

Powered by TrichoLAB

- One device. Complete hair assessment. No compromise.
- Capture detailed images of the scalp and trans-form them into objective hair statistics with analysis powered by TrichoLAB.
- Quantifiable results provide a clearer basis for documenting hair and scalp findings, evaluating development over time, and explaining treatment progress to patients.
- See the scalp. Measure the change.

learn more

Reveal what others are missing
with polarized light & UV dermoscopy.

Examine skin, scalp, and hair structures with high–resolution imaging and up to 40× magnification.

One capture.
Multiple views.

Discover the power of MultiShot™.

MultiShot™ gives you more – capturing polarized, non-polarized and UV-images in a single tap.

- Non-polarized light shows surface morphology and superficial details.
- Cross-polarized light reduces reflections and reveals deeper pigmented and vascular structures.
- UV light visualizes fluorescence patterns not visible under conventional illumination.

AI support,
built into your workflow.

FotoFinder AI*

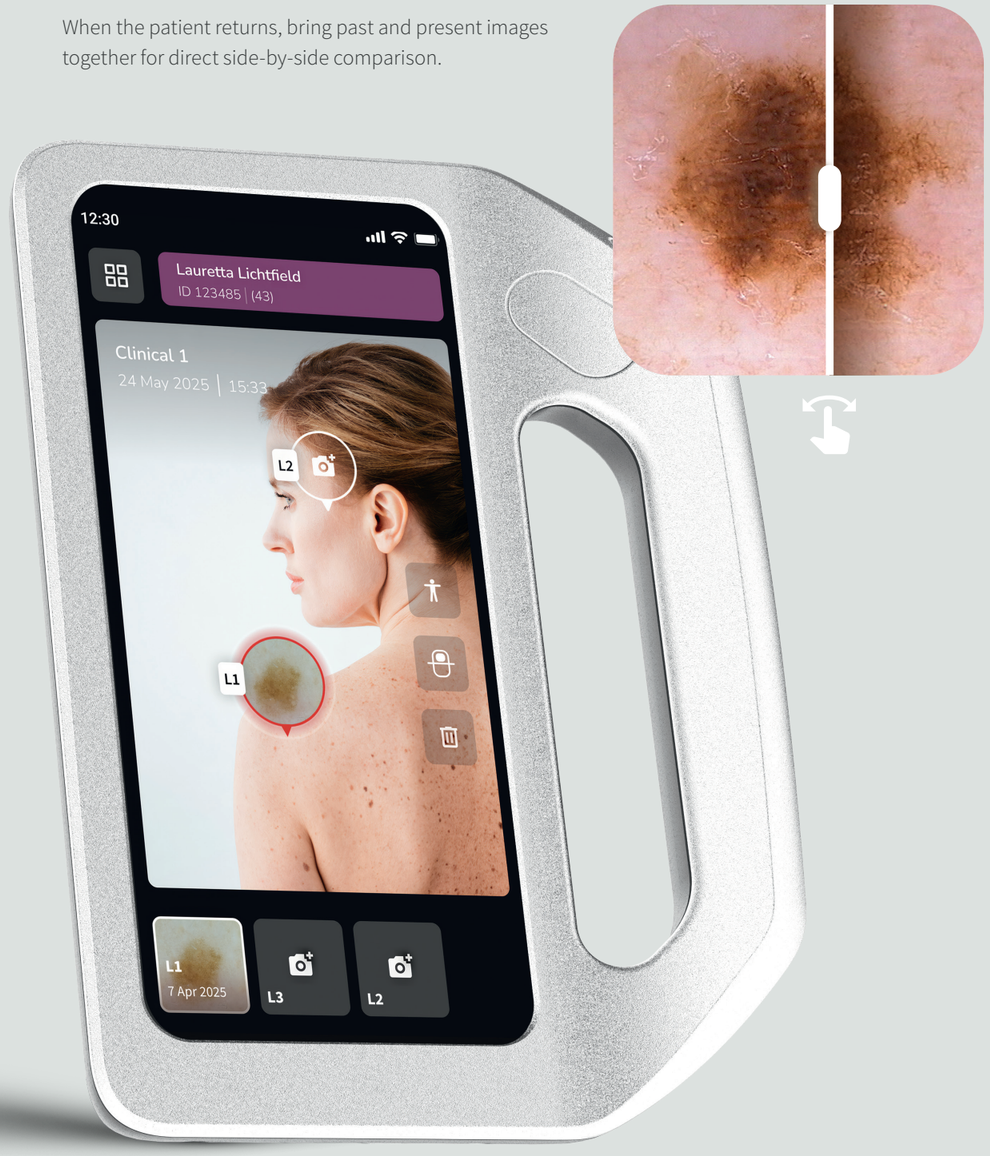
Get an AI Score within seconds for suitable dermoscopic images. Use it as decision support while clinical judgment stays with you.

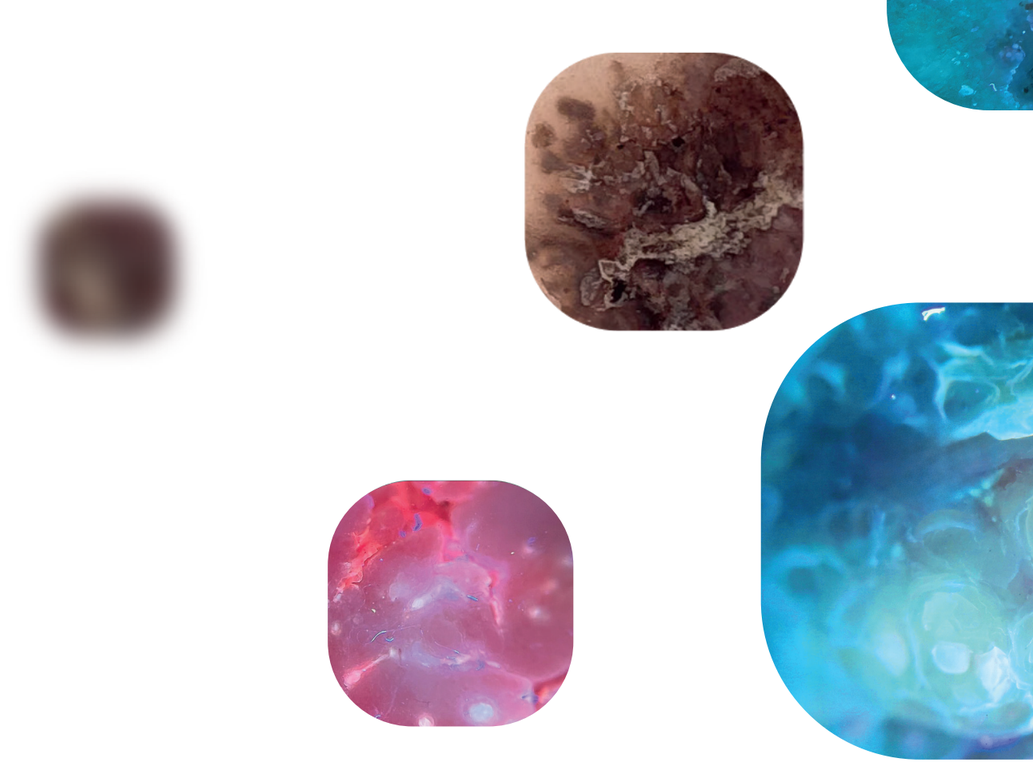
* FotoFinder AI is not FDA-cleared in the USA and not Health Canada approved for use in Canada.

One examination.
One continuous record.

Start with a clinical overview image or go straight to dermoscopy. Mark lesions on the clinical image and keep every follow-up connected to the same spot.

When the patient returns, bring past and present images together for direct side-by-side comparison.





Your dedicated **secure space for dermatology images.**

- Automatic backups to Hub, FotoFinder's secure cloud platform
- Access your data from any browser
- Create and share patient reports
- Review, organize, and manage cases efficiently

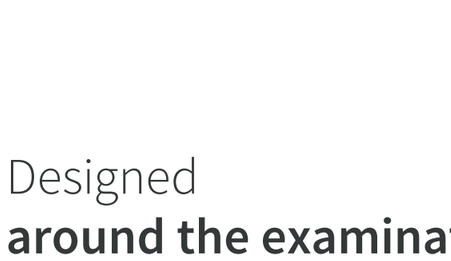
Hub

Designed
around the examination.

skeen is ready when the next patient is.

The one-piece design eliminates smartphone setup and external adapters. A large integrated display keeps images and information in view, while intuitive controls support fast navigation.

Smooth surfaces simplify routine cleaning. USB-C charging and the dedicated charging dock provide flexibility between examinations.



Features
& **Benefits**

Optics

- Two-element lens system with 15 mm diameter
- True 10× magnification for detailed examination
- 25 mm effective focal length
- Anti-reflective lens coating

Illumination

- Four cross-polarised white LEDs
- Four parallel-polarised white LEDs
- Four 365 nm UV LEDs and four 405 nm UV LEDs
- White light colour temperature: 5,000–8,000 K
- High-brightness illumination of ≥ 10 kLux
- UV intensity of ≥ 10 mW/cm²

Lighting Modes

- Cross-polarized light
- Non-polarized light
- Parallel-polarized light
- 365 nm UV light
- 405 nm UV light

Controls & Functions

- Intuitive two-button interface
- Direct image capture from the device
- Battery charge displayed as a percentage

Power

- 5,000 mAh lithium-polymer battery
- Up to 6 hours of continuous use at maximum brightness
- Charges to more than 75 % capacity in approximately 1.5 hours
- USB-C charging or convenient charging base

Your skeen digital dermatoscope includes

- Handheld imaging unit with 6.7" touchscreen
- Removable dermoscopy lens
- Charging base
- USB-C cable
- USB-PD power supply with intl. adapters
- IceCap™ disposable covers

Size & mass

- Dimensions: 180 × 127 × 33 mm
- Weight: 350 g
