■ HAcare, specialist in medical devices since 1860.

At HAcare, we design, manufacture and distribute medical devices and innovative, durable medical furniture solutions designed to improve the daily lives of patients and healthcare professionals alike.

The HAcare Group's eco-responsible commitments

The HAcare group commits to an **eco-responsible industrial orientation**

In its sustainable development strategy, the HAcare group has defined a list of **6 commitments** that guide its **actions and decisions** since the group's creation and for the years to come.

Indicators have been set up for each commitment.

Our 6 commitments

Made in France production

The use of renewable resources

Integrating the circular economy into all new product developments

Responsible purchasing (supplier quality monitoring)

Daily actions to respect and protect the environment

Combating RSI and noise pollution through our products

Choose the circular economy

HAcare finished products can be recycled through a recovery circuit at the end customer's premises, for recycling with our partner supplier. As wood cannot be recycled ad infinitum because its fibers become too small or exhausted, wood waste is recovered and transformed into green energy.

The plant fiber boards used in the manufacture of HAcare products are 100% reclaimed wood. Each HAcare finished product bears an index revealing the proportion of plant fiber contained.

Recycling is the practice of recovering used materials from the waste stream, then incorporating these same materials into the manufacturing process. Each HAcare finished product carries an index revealing the proportion of recycled material it contains.

Recyclable materials

HAcare finished products are 95% recyclable. For example, the HAcare medical bed is entirely recyclable, except for the wheels and motors. Each bed can be dismantled to recover each material separately: plant fiber, metal, plastic.

Recycled wood

The plant fiber boards used in the manufacture of HAcare Group products are:

100% reused wood

Reuse is one of the environmentally friendly processes. It involves, for example, leftovers from wood-processing companies (e.g. sawmill scraps, production offcuts...). But also by-products from activities such as sustainable forest management and slope maintenance.

100% FSC-certified wood

Recyclable with a partner supplier who, on a worldwide exclusive basis and since 2021, recycles MDF and HDF panels. No water consumption, nor green energy **biomass**.

The metal

All metal components are **recyclable** and reusable, **infinitely**. Once the metal has been sorted, it is compressed, crushed, rolled and melted. It is then remolded into coils, bars or wire for reuse. This process can be endless!

Metal recycling has **many advantages**. It conserves natural resources by reducing the need for virgin materials, cuts energy consumption and reduces **greenhouse gas emissions**.

Recycled plastic

At recycling plants, waste (re) becomes a **raw material** through various processes: grinding, micronization, regeneration of plastics.

The recycled plastic will then be resold to **plasturgy** manufacturers in the form of **flakes**, powder or even **granules**.

A leading level of certification

CHEMODIALYSIS CHAIR-BEDS HOSPITAL

Day Care Department

AMB7 FCD

BODY FLEX ARMRESTS

Multi-directional and fully **orientable**, they allow accurate positioning of the arm, simplifying vascular access during care. The 7.5 cm lateral translation better **fits morphology** and ensures **great comfort** for each patient and **optimized ergonomics** for the caregiver.

OUR EXCLUSIVES

Over the past 40 years, the average noise level in hospitals has increased by 15 decibels (dB), reaching levels of around 70 dB, well above the WHO recommended limit of 35 dB for a healthcare environment. HAcare products are designed to combat noise nuisance. The goal is to reduce by 20dB with the addition of dampers on all rolling and stretcherable structures

Fighting noise pollution

Anti-vibration support, **high-performance damper**: for **smooth, quiet** and **comfortable** stretching, even when crossing thresholds or exiting elevators. **Noise pollution is significantly reduced.**

In a hospital environment where every gesture counts, protecting the health of caregivers while guaranteeing patient safety is essential. Stretcher carrying, an activity with a high risk of RSI due to repeated efforts and awkward postures, requires adapted solutions. Designed to reduce drudgery and optimize movement, our medical devices become real everyday allies, improving comfort, ergonomics and quality of life at work.

Fighting MSDs

Ergonomic handles, double-roller wheels and **5th directional and synchronized wheel** for optimal **maneuverability**. Designed to limit RSI and adapt to all morphologies.

In a hospital environment where hygiene is essential, every minute of cleaning counts. Staff must ensure rigorous disinfection while maintaining a steady pace. EasyClean® meets this challenge by simplifying cleaning: protocols are respected without compromise, and the workload is lightened. The result: less effort, less wasted time and greater safety for all. EasyClean® is the guarantee of a cleaner, safer and more ergonomic environment, in the service of care quality.

Easy cleaning

Disassembly and detachment (by buttonholes) **without tools** for rapid **full cleaning**, **perfect hygiene** and a real gain in comfort for nursing staff.

Body Flex armrests

In dialysis or chemotherapy departments, patient comfort and safety are essential, as sessions are long and require partial immobility. Armrests must offer stable support, adapted to all morphologies, while simplifying vascular access. Ergonomics are also crucial to reduce the effort required of nursing staff, and to make care flow more smoothly. Ultra-comfortable, adjustable and inclusive devices must meet these requirements to improve patient experience and day-to-day efficiency.

Ergonomics and comfort for sampling or care

Designed to fit all morphologies, the **Body Flex armrests** are **multi-directional**, **orientable** and **translatable** by 7.5 cm for optimal arm positioning.

HIGHLIGHTS

Optimizing the care surface (Easy Clip)

With the **EasyClip®** concept, gain in efficiency and work comfort. This **intuitive, tool-free** and effortless **fixing system** makes it easy to **position**, move or remove **accessories**.

Modulable at will, EasyClip® adapts to the specific needs of each care situation, whatever the type of pathology.

Double columns and high stability (Elevation system)

Thanks to its **two-column** design, the chair offers unrivalled **stability**. Its sturdiness eliminates any risk of unwanted movement and guarantees optimum safety during care.

For the patient, this stability is a guarantee of confidence: he or she can sit on the leg rest without fear of tipping over, making it easier to settle in and **reducing stress**.

For care teams, it's the guarantee of **reliable equipment**, designed to last and accompany every gesture with complete peace of mind.

Customized coatings (Configurable)

Because every detail counts in the care experience, a **wide choice of colors** and decors allows you to create **harmonious**, warm and **easily identifiable** spaces, particularly suited to outpatient departments.

Head cushions, footrest cushions or upholstery can be declined to **integrate with your environment**. A solution that combines comfort, aesthetics and visual identity at the service of both patient and caregiver.

Ultra-comfort in a single gesture (Pre-programmed functions)

With our **intuitive pre-programmed control system**, a single press on the remote control is all it takes to access the "**Ultra-comfort**" position, also known as "**zero gravity**".

This ergonomic position has been designed to distribute body pressures evenly over the entire mattress. The pelvis, legs and back are positioned to promote **muscular relaxation**, **relieve joint tension** and **stimulate blood circulation**, while reducing areas of compression.

This feature plays a full part in improving perceived comfort, **preventing postural pain** and quality of care. Thoughtfully designed for patient well-being and ease of use for staff, this accessible **in one gesture** adjustment fits naturally into daily care practices. **Optimized comfort, relieved tension, favored circulation.**

Two positions accessible **in a single gesture** (a single control) for **comfort** and **ultra-comfort "Zero gravity"**.

Two widths to suit every body shape (Comfort)

Because **each patient is unique**, our chairs are available in **two seat widths**: 65 cm and 75 cm. This dual option makes it possible to meet the needs of **various morphologies**, whether a standard build or a heavier patient, while ensuring optimal comfort without compromising on ergonomics or safety.

A solution designed to adapt to all profiles, with a view to **inclusivity** and **quality of care**.

Easy maintenance (Interchangeability)

Our devices have been designed to make everyday life easier for caregivers and technical teams: the **elements** are fully interchangeable without tools, enabling quick, safe and stress-free adjustments.

The **motors can be unclipped** without manipulation of the wiring, considerably reducing technical interventions and the risk of error.

This ingenious design enables simplified and rapid **SAV**, with a clear objective: to minimize equipment downtime, guarantee continuity of care and optimize the availability of your equipment.

The QR Code to access any information (Traceability)

The **QR Code**, present on each product, gives **access to key information** such as product destination, instructions for use, eco-responsibility, technical data sheets, installation help...

This information is stored on our **SavTech** platform and **accessible** by scanning this QR Code.

CHARACTERISTICS

Fluid mobility and assured stability: 125 mm wheels with centralized braking

The chair is equipped with large-diameter wheels (125 mm), designed to offer **optimum mobility** on all types of floor.

Thanks to their size, they enable **fluid movement, without effort**, even over long distances or with a patient settled.

To guarantee safety at every stage, the chair is equipped with an **independent (or centralized)** braking system. With a single gesture, the caregiver can immobilize or release all the wheels, ensuring maximum stability during patient installation, care or transfers.

This device combines **ergonomics, safety** and **efficiency**, meeting the requirements of dynamic care environments while facilitating the daily life of teams.

Mobility to suit every need: a choice of wheels for intensive use

Because mobility needs vary according to departments and uses, our chair is available with **different wheel configurations**, to ensure optimum maneuverability in all situations.

For facilities where movement is frequent and sometimes over long distances - outpatient departments, hospitals, dialysis centers, we offer **optional 150 mm** diameter wheels, designed to provide **better rolling fluidity**, including on uneven surfaces or during more intensive **branding**.

A fifth central wheel can be added to improve **directional stability** and **facilitate manoeuvrability** in narrow corridors or when turning, thus reducing the effort required of nursing staff.

This choice of configuration allows each facility to customize the level of mobility to suit its field constraints, while ensuring safety, comfort and logistical efficiency.

Fluid, ergonomic driving: effortless guidance, lasting comfort

To meet the demands of transport in healthcare environments, our chair is equipped with **ergonomic push handles**, specially designed to **facilitate guidance** and reduce caregiver fatigue, even when moving frequently or on difficult floors.

Associated with the Soft Sound system, these handles provide **optimum maneuverability**, ensuring **stable, fluid** and **silent** movement, even with a settled patient. Their design takes into account the realities of everyday hospital life: less effort, more control, whatever the conditions.

They offer a **large grip zone**, a natural grip, adapted to all morphologies. This ergonomics has been designed to **limit the risk of musculoskeletal disorders** (MSDs), preserving the gestures and postures of nursing staff.

The ergonomic remote control

Comfort position in one step:

This simple operation facilitates the caregiver's work and helps optimize time during the caregiver-patient relationship.

Nursing position in one step:

This control prevents caregivers from bending down during patient care, and effectively combats RSI.

Trendelenburg position in one step

Secure emergency care and patient comfort thanks to a **key to secure the trendelenburg function** and direct, simplified access to the Trendelenburg and Trendelenburg positions.

Save time for caregivers, better reactivity on a daily basis.

The ergonomic patient satellite

Its ergonomic design enhances the patient's **autonomy**. The latter can easily control the chair's various functions. When not in use, the patient can simply position the satellite on its side.

The control satellite incorporates a **LED lighting** to improve **reading comfort**, even during long care sessions.

It is also equipped with a **USB port**, enabling the patient to easily recharge their phone or leisure devices, completely independently.

To adapt to every dialysis care situation, the satellite can be positioned, without tools, **to the left or right** of the back rest, offering **optimum accessibility** for both patient and caregiver and **adapts** perfectly to **the layout**.

>.

Integrated LED light and USB port for patient comfort

Because patient well-being is about more than posture, our chair incorporates a **multifunction satellite**, designed to provide **comfort** and **autonomy** during prolonged care.

This module is equipped with a **directional LED lamp**, ideal for providing soft, targeted **lighting**, facilitating reading, writing or simply a moment of relaxation during care.

It allows patients to maintain personal activity without interfering with care or disturbing the care environment.

The satellite also features a **integrated USB port**, allowing easy recharging of phones, tablets or other electronic devices.

A feature designed to **preserve the social link**, keep in touch with loved ones or simply enjoy entertainment content during waiting times.

Nursing

The "Nursing" position is directly accessible **in a single gesture** thanks to the **pre-programmed** care buttons.

Intuitive and fast, this feature makes it easy to set up the ideal posture for daily care. It enables caregivers to intervene at the right height, without having to bend over or multiply manipulations, **reducing** fatigue and the risk of **musculoskeletal disorders**.

For the patient, it's the assurance of **preserved comfort** and smooth **management**.

A solution designed to optimize efficiency, secure gestures and improve the well-being of everyone, at the heart of care.

Patient Welcome

The "Accueil patient" position is specially designed to **secure and facilitate transfers**. Recommended by occupational therapists: perfectly suited for patient reception with full autonomy or minimal assistance. This position, directly accessible **in a single gesture** thanks to the **pre-programmed buttons**, promotes patient confidence and comfort while simplifying the work of caregivers, who can accompany movements without excessive effort.

A solution that combines **safety, ergonomics** and well-being, serving the daily lives of teams and patients.

Ultra-Comfort (Zero Gravity)

With our intuitive control system, the "Ultra-comfort" position, also known as "**Zero gravity**" is directly accessible **in a single gesture** thanks to the pre-programmed **keys**.

This **ergonomic** position has been designed to distribute body pressures evenly over the entire mattress. The pelvis, legs and back are positioned to promote **muscular relaxation, relieve joint tension** and stimulate blood circulation, while **reducing areas of compression**.

The sensation of well-being is immediate, both for the patient and for those in long-stay or extended care.

This function plays a full part in the **improvement of perceived comfort**, the **prevention of postural pain** and the quality of care.

Emergency declive

The "Emergency Trendelenburg" position can be accessed **in a single gesture** thanks to the pre-programmed **keys**.

This function quickly tilts the patient into the Trendelenburg position, essential in the event of malaise or shock in order to **favor blood return** to vital organs. Designed to maximize the **rapidity of action**, it makes care safer while reducing the stress associated with critical situations.

Ergonomic and intuitive, this control provides care staff with a **reliable** and **immediate** tool, guaranteeing efficiency, safety and operating comfort.

Integrated battery backup: guaranteed service continuity

To ensure maximum safety and continuity of care, our chair is equipped with a **high-performance battery backup** that automatically takes over in the event of a power failure. This autonomy enables caregivers to **maintain** all the **essential functions** of the chair - position adjustments, back rest, leg rest, variable height - without interruption, even in the event of a power cut.

This solution not only guarantees patient safety and comfort, by preventing any untimely blockages, but also provides **peace of mind** for care teams, by ensuring **fluent** and stress-free management of **emergency situations**. Thanks to this battery, care continues without compromise, whatever the environment or circumstance.

Immediate responsiveness in critical situations

Because some situations require a fast, uncompromising response, our chair can be equipped with an optional **emergency slope-lowering pedal**. Placed within easy reach of the caregiver's foot, this control instantly switches the chair to **the sloping position, without manual handling** or loss of time.

This device is particularly useful in the event of vagal discomfort, a drop in blood pressure or a medical incident requiring **immediate reactivity**. It enables rapid restoration of cerebral perfusion, while keeping the hands free to monitor or assist the patient.

Simple, robust and intuitive, the declive pedal meets the **safety** requirements of acute or prolonged care environments, reinforcing the **rapid intervention capability** of nursing staff.

CPR manual

Designed to guarantee safety and responsiveness in all circumstances, the **backrest lift disengagement system** is equipped with **two handles** (bilateral) easily accessible under the lying surface. Intuitively positioned, they enable the caregiver to instantly disengage the actuator to **lower** the backrest lift, or to return it to a fully flat position in **emergency situations**. This ergonomic design reduces complex handling and ensures rapid **intervention**, limiting patient stress and facilitating the work of medical teams. Reliable, simple and secure, this device is an essential asset for **enhancing the quality of care** and the peace of mind of nursing staff.

Integrated USB connection for added convenience

Comfort and autonomy enhanced by the **integrated USB connection**. To enhance **patient well-being** during care, a USB socket is integrated directly into the backrest support. It makes it easy to recharge a smartphone, tablet or other mobile device, without having to leave the chair. This feature promotes **comfort, autonomy** and **continuity of the patient's digital habits**.

Two widths to suit every body shape.

Because **every patient is unique**, our chairs are available in **two seat widths**: 65 cm and 75 cm. This dual option makes it possible to meet the needs of **various morphologies**, whether a standard build or a heavier patient, while ensuring optimum comfort without compromising on ergonomics or safety. A solution designed to adapt to all profiles, with a view to **inclusivity** and **quality of care**.

Removable mattress with removable covers

Covers **with buttonhole covers** offer a fast, practical solution for maintenance. Thanks to this **ingenious system**, replacement takes just a few simple steps, with no complex disassembly or loss of time. As a result, staff can ensure **impeccable hygiene** with a minimum of effort, while **extending equipment life**. **Again in efficiency** and **comfort** that contributes to a safer, more pleasant environment for caregivers and patients alike.

PACK - EQUIPMENT

Equipment	Anatomic shaped armrests for backrest inclination with multi-directional ball-and-socket joint adjustment, retractable behind the backrest for lateral transfer of the patient / Adjustable headrest
