Perform precise skin analysis

Perform professional and accurate skin analysis with the DermaLab Mini, the ultimate tool for all your skin measurement needs.

Designed for dermatologists, clinical testing and researchers, it delivers reliable, high-quality data to support your work.

The DermaLab concept

Customize your DermaLab Mini by selecting the specific parameters you need.

Choose from 11 probes and combine up to 5 parameters in one device, resulting in a compact and efficient analysis solution designed for your purpose. Delivered with probes, main unit, and software.

NEW mini version

This compact skin analysis instrument is a smaller version of the renowned DermaLab Combo, a trusted tool in the industry. Designed to meet specific measurement requirements, it allows you to select the parameters that are most relevant to you.

The device is compatible with 1 to 5 probes – you choose how many you need.

Efficient skin analysis

Get the exact parameters you need in a compact, powerful instrument
