HEINE DELTA 30 UV Dermatoscope

A glow beyond the visible. Ultraviolet, polarised, and non-polarised illumination united in one advanced dermatoscope.

By expanding the light spectrum, the HEINE DELTA 30 UV Dermatoscope enhances what is visible and highlights structural details – delivering galactic diagnostic clarity. Its intuitive handling and seamless integration of multiple illumination options streamlines examinations and supports confident clinical decision-making.

Achromatic HEINE optical system for an optimal visual field

- 32 mm lens delivering a “real” 30 mm field of view
- 10 x magnification for detailed examination
- Integrated dioptre adjustment for more precise focusing

Three illumination options in one device

- Toggle easily between UV, polarised, and non-polarised illumination
- Natural colour rendering for enhanced contrast and accurate assessment

Long-lasting and robust for high reliability

- Ultra-light aluminium frame for strength and durability
- LED^{HQ} with virtually unlimited lifetime and consistenly strong performance

smooth SURFACE

- Hygienic design, easy-to-clean surface
- Recessed connections to support optimal hygiene standards

HEINE DELTA 30 UV Dermatoscope

UV illumination for fluorescence visualization

- Twelve UV LEDs at typically 365 nm provide uniform illumination
- Special filters ensure pure, consistent UV light while eliminating stray wavelengths

Custom light intensity

- Side-mounted button with three degrees of luminous intensity
- Adjustable for both white light and UV illumination

Smart power source options

- Charge status indicator
- Automatic switch-off function
- Rechargeable with USB-C via cable or charging station

Intuitive and ergonomic

- Angled handle design for perfect positioning
- Easy usage for fast but precise examinations
- Compact size for mobile and flexible use
