

## Gipswagen Insausti

Especially for the areas where plaster is set, Insausti has developed plaster trolleys. Since these areas are often used for working with water, it can be equipped with a folding worktop with two basins. In this way it is possible to work close to the patient without having to walk to the sink every time and avoid the associated mess. Both the polyethylene frame and worktop are hygienic and easy to clean. The folding worktop is removable, making it easy to disinfect.

Insausti's ISO trolleys and SQ trolleys have a clinical look and are perfectly applicable within all disciplines of the hospital. Insausti's strength is the innovative design conceived in Spain in collaboration with health professionals worldwide. Especially the self-closing and fully extendable drawers are unique in the market.
