

Meladem 40 MELAG

Economical demineralizer

MELAdem 40 enables the economical production of demineralized water (aqua dem) in practice. Following the principle of ion exchange, ions that contaminate tap water (e.g. calcium, magnesium, etc.) are exchanged for hydrogen and hydroxide ions. In this way, MELAdem 40 provides high quality feed water for the automatic feeding of MELAG steam sterilizers of the Premium-Class, the Pro-Class and Euroclave.
