

Sterilizer Melag - Vacuklav 41 B+ Evolution

Quick, easy-to-use and stand-alone – now with DRYtelligence

This high-performance practice steam sterilizer brings the same record operating times as the almost identical Vacuklav 40 B+ Evolution. Its innovative double chamber technology means the sterilization and drying of unwrapped instruments in only 10 minutes; wrapped instruments in a Class-B program require no more than 20 minutes. Both times include fractionated pre-vacuum and drying. The intelligent drying system DRYtelligence uses especially-developed algorithms to adapt the drying to the load in order to shorten the operating times even further and save resources. The Vacuklav 41 B+ Evolution is fitted with an effective air-cooling system, making it into a true stand-alone steam sterilizer as it requires no connections other than to the electricity supply.

Features:

- Patented double-jacket technology brings the fastest of operating times
- DRYtelligence - intelligent drying for every loading configuration
- Documentation, approval and traceability via XXL colour-touch display with intuitive operating interface
- Maximum load quantity 9 kg
- Stand-alone with effective air-cooling system
- MELAconnect App - access the device status and program progress via the mobile app
- Helpful video tutorials on our Multimedia channel
