

DermLite Nailio™ only (requires Foto X)

PRODUCT REFERENCE: NAILIO

Versatile Base with Red Light.

Once you attach DermLite Foto X to Nailio, you'll have unparalleled portable digital dermoscopy, nail imaging and capillaroscopy. Nailio, with its brightness-adjustable red LED, improves visualization of deep nail structures and capillaries.

All angles covered

Nailio provides a steady platform for your patient's finger or toe and tilts from side to side, allowing you to examine the nail from various angles. It is even possible to examine the distal nail.

Highlight features.

By being able to independently adjust brightness of white and red light, choose the perfect balance to highlight the particular structures you care about.

Camera Compatible

Whether you use Foto X in combination with Nailio or on its own, simply attach your smartphone, tablet or camera (via an optional magnetic adapter, sold separately), and capture dermoscopic images of amazing clarity.

See deeper than ever before

Aside from classic dermoscopy, DermLite Foto X & Nailio may help with differential diagnosis of hematoma vs. melanin pigmentation, differentiating different types of onycholysis, and may be helpful in the management of melanonychia.

Versatile Imaging

Capture amazing photos with virtually any compact, mirrorless or DSLR camera

Infection Control – Covered

Nailio's smooth exterior is easy to keep clean and easy to disinfect. For the ultimate in protection, custom-fitted disposable IceCap® Covers slip over its base plate. Each Nailio includes a small sample supply, packs of 50 are sold separately.
