

Baby care unit Zerofire

Specially designed for use by midwives.

This baby care unit has a bathtub and an examination table where the little patients receive their first care.

Hygiene is ensured by the surface of Dupont™ Corian® instead of plastic. The unit has wheels and extendable tubes for hydraulic connection up to 2m. This allows easy movement of the bed, which until now was difficult because the unit was fixed to the wall. The bathtub is unique on the market thanks to its ergonomic shape that has been specially designed for bathing newborn babies.
