

Pediatric bed in 2 parts with manual height adjustment - 9LP0170

Manual paediatric bed with two sections platform and side rails made of aluminium bars.

- Height-adjustable platform with Trendelenburg and reverse-Trendelenburg positions.
- The platform movement is manual, assisted by gas springs to reduce the operator effort to the minimum.
- Equipped with removable headboard and footboard made of transparent shockproof plastic material.

Frame

- The very sturdy structure is made of thick steel profiles
- Painted with epoxy powders for high protection against scratches, corrosion and bacterial adhesion.

Matress Platform

- Two section bed platform consisting of a perimeter frame made of epoxy powder coated steel profiles. The two sections platform is made of removable ABS elements.
- The bed platform is equipped with ventilation holes and contained edges for the mattress. All components are free of sharp edges, washable and sanitisable.
- The back section is manually adjustable. There are two levers (CPR levers) for manual lowering of the back section at the head side. The descent is slowed down.
- The height of the platform is manually adjustable thanks to gas pistons so that the operator effort is reduced.
- Trendelenburg and reverse Trendelenburg movements offer great flexibility in both positioning and patient care.
- Bumpers at the four corners of the cot are provided.

Headboard and footboard

- The headboard and footboard are made of transparent shockproof plexiglass with upper perimeter protection crosspieces in plastic material.
- The quick and easy removal of the headboard and footboard by the locking / unlocking system allows

easy access to the child incase of emergency.

Side rails

- The bed is fitted as standard with lightweight, sturdy side rails in epoxy powder-coated aluminum, which can be folded down using a central control.
- Available in various colors.

Castors

4 Ø 125 mm castors with central braking system.

Features

Number of sections	2 sections
