

PDT 9000 Medisun

The new painless PDT

Medisun PDT 9000 is an innovative light treatment system for the painless exposure of photodynamic therapy (PDT) with polychromatic spectra of a high power LED light source.

Medisun® PDT 9000 contains a three-dimensional exposure field around the head. The affected skin areas can be treated in one or more sessions. Excellent tolerance and excellent therapy results are achieved.

Advantages

- Painless and efficient
- During the exposure, the patient can listen to music, read or simply relax
- Only 1 hour of exposure time required with the clinically approved painless standard protocol
- Shorter exposure times, e.g. 30 minutes or 45 minutes are integrated (PC version)
- Single or multiple lesions can be treated in one exposure process
- Therapy is independent of the weather
- Individual adjustment of parameters - future-proof and flexible
- Little space required (120 cm x 120 cm), no structural alterations required, only a standard 230 V plug
- Cost-effective
- With Multi-Colour-PC-Control (optional), integrated D-fluorescence diagnosis (woodlight), red light, blue light, SAD therapy, individually programmable light spectra and therapy protocols
