

UV-cabin Innovation 2M 2800 Medisun

Professional therapy for the whole body

Medisun® 2800 Innovation is the new technological standard for UV treatment of the whole body with UVB-311 and UVA. It is operated using a modern touch computer. Exposures with UVA, UVB-311 or a combined spectrum are possible. A version with UVA-1 mono spectrum spectrum is also available. The UV lamps are arranged in an ergonomically optimised way. A newly developed software in combination with an intelligent lamp controller improves the dosing accuracy compared to conventional UV cabins.

Features

- 40 UV lamps in 8 columns
- 2 m lamps
- UVB-311 and / or UVA-1
- 10.4" colour touch PC with dosage control
- Real-time UV sensor measurement
