

Syris V900L Headlight - v900L Visualization System Syris

PRODUCT REFERENCE: V900L

The Syris® v900L visualization system combines a proprietary superior white-light LED with two-way polarization to enhance your vision during dermal exams & procedures by removing surface glare from the patient's skin promoting improved viewing of sub-surface features.

The v900L is battery-powered for unrestricted mobility, easily adjustable, and quiet.

Features & Benefits

- Adjustable polarizer allows for both surface and sub-surface viewing; approximately 1mm.
- Control module houses the battery and easily attaches to the waist allowing for unrestricted user mobility.
- Control module offers dual settings for adjustable light intensity and extended battery life options.
- Visi-Shield (1.75x included) provides for an unobstructed field of view and changeable magnification options.
- Lightweight vein visor headgear has two adjustable knobs and combined with the foam cushion headband pads provide for a comfortable fit.
- Rechargeable lithium-ion battery provides approximately 4 hours of continuous operation when fully charged.
- A charger is included with the system to keep the battery charged while not in use. To ensure that the v900L is always available, it is recommended that a second battery be acquired to allow for continual use of the Syris Scientific® v900L while the depleted battery is being charged.
