

Cryopro mini 0,3l

PRODUCT REFERENCE: 411

Cryosurgery with liquid nitrogen is the treatment of choice or an alternative method for the treatment of many skin lesions and cervical erosions.

The CryoPro is available in two sizes:

- CryoPro Maxi with 500 ml capacity (20 - 24 hour static shelf life)
- CryoPro Mini with a capacity of 350 ml (12 -14 hours static hold)

Each unit comes with a set of spray applicators for the most common lesions (e.g. warts, small tumours, etc.).

Optionally, contact probes are available in different sizes. These probes are particularly useful for checking the lateral spread of the freeze (e.g. near the eye or in the oral cavity).

The contact probes are selected according to the actual lesion, and they provide a deep freeze with minimal lateral spread.
